

# Customer Journey Map

**Project:** Implement Client Script & UI Policy (Incident) | **Team ID:** SWTID-2026-4375

**Scenario:** Configuring, using and testing client-side validation (UI Policy and Client Scripts) on the ServiceNow Incident form. **Personas:** ServiceNow Administrator; Service Desk Agent / Incident Manager.

| <b>SCENARIO</b><br>Configure, use and test Incident validation                                                                                                                          | <br><b>Entice</b><br>How does someone initially become aware of this process? | <br><b>Enter</b><br>What do people experience as they begin the process? | <br><b>Engage</b><br>In the core moments in the process, what happens? | <br><b>Exit</b><br>What do people typically experience as the process finishes? | <br><b>Extend</b><br>What happens after the experience is over? |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
|  <b>Steps</b><br>What does the person (or group) typically experience?                                  | 1. Notice incomplete or inconsistent Incident data<br>2. Decide the rules needed for High impact incidents                                                     | 1. Log in to the ServiceNow instance<br>2. Open System UI > UI Policies and create "High Impact Control"                                                  | 1. Add UI Policy Actions (Assignment group mandatory, Urgency read-only)<br>2. Create onChange, onSubmit and onCellEdit Client Scripts                    | 1. Agent sets Impact = High and submits the form<br>2. Save is allowed or blocked by validation                                                                    | 1. Test reverse condition, list-edit blocking and form update<br>2. Rules stay active for every Incident                                           |
|  <b>Interactions</b><br>What interactions do they have at each step?<br>People, Places, Things          | <b>People:</b> Administrator, service desk lead<br><b>Places:</b> Incident list and reports<br><b>Things:</b> Business rules, SLA data                         | <b>People:</b> Administrator<br><b>Places:</b> ServiceNow instance in browser<br><b>Things:</b> System UI > UI Policies                                   | <b>People:</b> Administrator<br><b>Places:</b> UI Policy form, Client Script editor<br><b>Things:</b> JavaScript, g_form API                              | <b>People:</b> Service Desk Agent, Incident Manager<br><b>Places:</b> Incident form<br><b>Things:</b> Impact, Urgency, Assigned To                                 | <b>People:</b> Incident Manager<br><b>Places:</b> Incident form and list view<br><b>Things:</b> State field, double-click edit                     |
|  <b>Goals &amp; motivations</b><br>At each step, what is the primary goal or motivation?                | Help me understand why incident data is inconsistent                                                                                                           | Help me reach the right configuration screens quickly                                                                                                     | Help me enforce rules on the form without server-side code                                                                                                | Help me submit only complete and valid incidents                                                                                                                   | Help me confirm every rule works and reverts correctly                                                                                             |
|  <b>Positive moments</b><br>What steps does a typical person find enjoyable, productive or delightful? | Clear rules make triage and routing easier                                                                                                                     | Simple navigation, no external tools needed                                                                                                               | Urgency is auto-set to High; rules react instantly in the browser                                                                                         | A clear error on Assigned To guides the fix; valid records save smoothly                                                                                           | "Reverse if false" restores fields; cleaner data for reporting                                                                                     |
|  <b>Negative moments</b><br>What steps does a typical person find frustrating or confusing?           | Incomplete data hurts reporting and SLA compliance                                                                                                             | Risk of choosing the wrong table or condition                                                                                                             | A typo in a field name can break the script                                                                                                               | Save is blocked until Assigned To is filled in                                                                                                                     | State cannot be edited from the list; the form must be opened                                                                                      |
|  <b>Areas of opportunity</b><br>How might we make each step better?                                   | Standardise data-entry rules for more fields                                                                                                                   | Document policy names and conditions clearly                                                                                                              | Reuse scripts; add server-side checks for imports and APIs                                                                                                | Show helpful field messages to guide agents                                                                                                                        | Add more test cases; extend to Problem and Change                                                                                                  |
