

Define CS, fit into	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 0-5 y.o. kids • ServiceNow Service Desk agents / fulfillers who create, triage and update Incident records. • ServiceNow admins & developers who configure the Incident form. • IT support managers who rely on accurate reports and SLA compliance.	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. • Depends on user awareness and manual checks; nothing enforces the rules. • Agents work under time pressure and may skip or mis-enter fields. • Controls need admin / configuration access to the instance. • Rules must stay lightweight, must not slow the form, and be easy to maintain.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking • Manual review & training: cheap, but inconsistent and only catches errors after the fact. • Server-side rules (Data Policy / Business Rule): reliable, but feedback comes only after save and there is no dynamic form behaviour. • Always-mandatory fields: simple, but cannot depend on Impact.	Explore AS,
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. • Make Assignment group mandatory when Impact is High (UI Policy). • Make Urgency read-only and auto-set it to High for High-impact incidents. • Block save when Impact is High and Assigned To is empty. • Block State edits made directly from the Incident list.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. • Incident data quality depends on manual awareness, not enforced rules. • Incomplete or inconsistent fields (assignment, urgency) lead to wrong triage and routing. • That hurts reporting accuracy, SLA compliance and overall service quality. • There is no client-side validation for high-impact business rules.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) • Directly related: agents fill the form quickly, change Impact and expect Urgency to follow, and often skip Assignment group / Assigned To. • Some agents edit State inline from list views instead of opening the record. • Indirectly related: managers check reports and correct bad data afterwards (rework).	Focus on J&P, tap into BE, understand
	3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. • Impact is set to 1 - High on an Incident. • User tries to save without Assigned To. • User edits State directly in the list.	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. • UI Policy "High Impact Control" (Impact = 1 - High): Assignment group mandatory, Urgency read-only; reversed when false. • onChange (Impact): High impact auto-sets Urgency to High with an info message. • onSubmit: blocks save if Impact is High and Assigned To is empty. • onCellEdit (State): alerts and cancels State edits made from the list.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 • ServiceNow Incident form (Create New / Open) and Incident list view. • Reports and dashboards used to monitor incidents. 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. • Issues raised by phone call, walk-in or email are logged as Incidents by the service desk. • Team briefings and process guidelines on required Incident data.	Extract online & offline CH of
Identify strong TR &	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. • Before: unsure which fields are required, errors found late, rework. • After: confident and in control, guided by clear on-screen messages.
